Stef,

I've attached a spreadsheet sent to DDOE and the other stakeholder with the analysis of the samples taken during the discharge of Basin #2 in December 2014. That is the chart I make reference to in the notes I've added to DDOE's letter to Jon.

In those notes I did a rough conversion of their pdf to a Word document. I did not attempt to clean up the errors in translation because you have the original document (copy attached) and can read from that one -- but by placing my comments inside that document in "track changes" I thought that would be the best way for you to reference my comments to DDOE's original content.

The final chart on how much we estimated to be in the basins is what DDOE asked for at the beginning of the process and it's the best we can do analytically. To be sure it is not definitive and therefore we should not try to use it as the basis of a formula for limiting the concentration of any future bypass.

I need to leave the office at 5:00 pm to go to the funeral home. I will be back in the office at 6:00 am Friday.

Tom
